

IP-PRACTICAL NO 7

Date of Performance: 27-09-2022

Software Requirement: Visual Studio Code, Notepad, Notepad++, NodeJS

Aim: To use JavaScript to implement form validation.

Objectives: The aim of this experiment is that the students will :

- Implement JavaScript syntax to create forms.
- Understand different features of JavaScript & its usage in form validation.

Outcomes: After study of this experiment, the students will be able to:

- Create forms and validate different fields in it.
- Implement the usage of JavaScript in creation and validation of forms.

Prerequisite: Basic knowledge of JavaScript and HTML/CSS syntax required.

Theory:

Forms are used in webpages for the user to enter their required details that further send it to the server for processing. A form is also known as a web form or HTML form. Examples of form use are prevalent in e-commerce websites, online banking, online surveys to name a few.

Validating a form: The data entered into a form needs to be in the right format and certain fields need to be filled in order to effectively use the submitted form. Username, password, contact information are some details that are mandatory in forms and thus need to be provided by the user.

JavaScript provides facility to validate the form on the client-side so data processing will be faster than server-side validation. Most of the web developers prefer JavaScript form validation.

Through JavaScript, we can validate name, password, email, date, mobile numbers and more fields.

Problem Statement:

Implement form validation in JavaScript.

Source Code and Output:

```

>>>Note: Kindly login through your Domain ID

MHSSCOE- Student Login

Enter Name :

Enter Mobile No :

Enter Email ID :

Enter Username :

Enter Password :

Confirm Password:

Alert pops up if the form is not filled & submitted. Click on OK to continue filling the form.

This page says
Please enter your name

OK

MHSSCOE- Student Login

Enter Name :

Enter Mobile No :

Enter Email ID :

Enter Username :

Enter Password :

Confirm Password:

Alert pops up if any of the fields are left to be filled before submitting form.

This page says
Please enter the user name.

MHSSCOE- Student Login

Enter Name :

Enter Mobile No :

Enter Email ID :

Enter Username :

Enter Password :

Confirm Password:

This page says
Please enter your mobile number

MHSSCOE- Student Login

Enter Name :

Enter Mobile No :

Enter Email ID :

Enter Username :

Enter Password :

Confirm Password:

This page says
Please enter your user email id

MHSSCOE- Student Login

Enter Name :

Enter Mobile No :

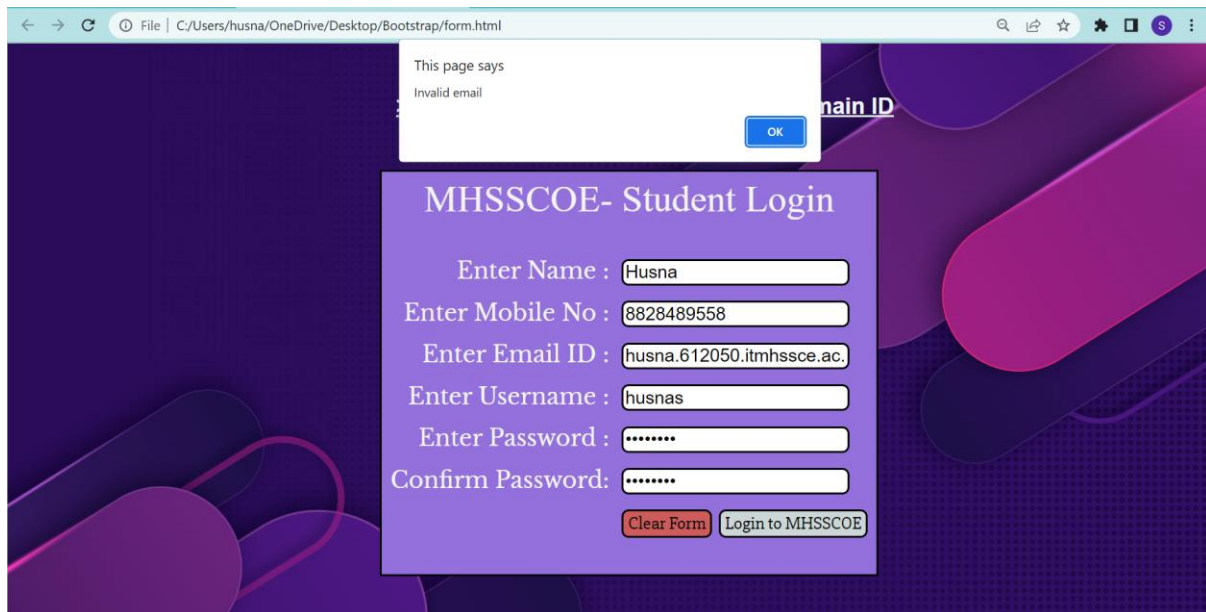

Enter Email ID :

Enter Username :

Enter Password :

Confirm Password:

Alert pops up if any special character is missing from email.

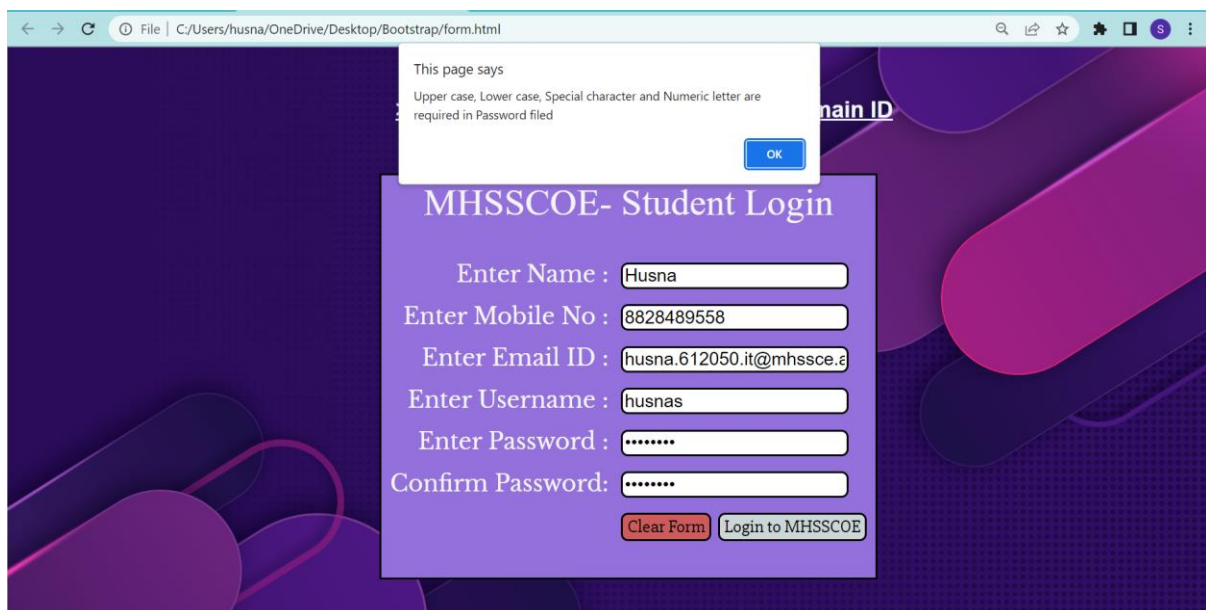

The screenshot shows a web browser window with the address bar displaying 'File | C:/Users/husna/OneDrive/Desktop/Bootstrap/form.html'. An alert box is visible, stating 'This page says Invalid email' with an 'OK' button. Below the alert is a purple login form titled 'MHSSCOE- Student Login'. The form contains the following fields and values:

- Enter Name :
- Enter Mobile No :
- Enter Email ID :
- Enter Username :
- Enter Password :
- Confirm Password:

At the bottom of the form are two buttons: 'Clear Form' (red) and 'Login to MHSSCOE' (green). The background of the page features abstract purple and pink shapes.

Alert pops up if the password doesn't match the criteria.

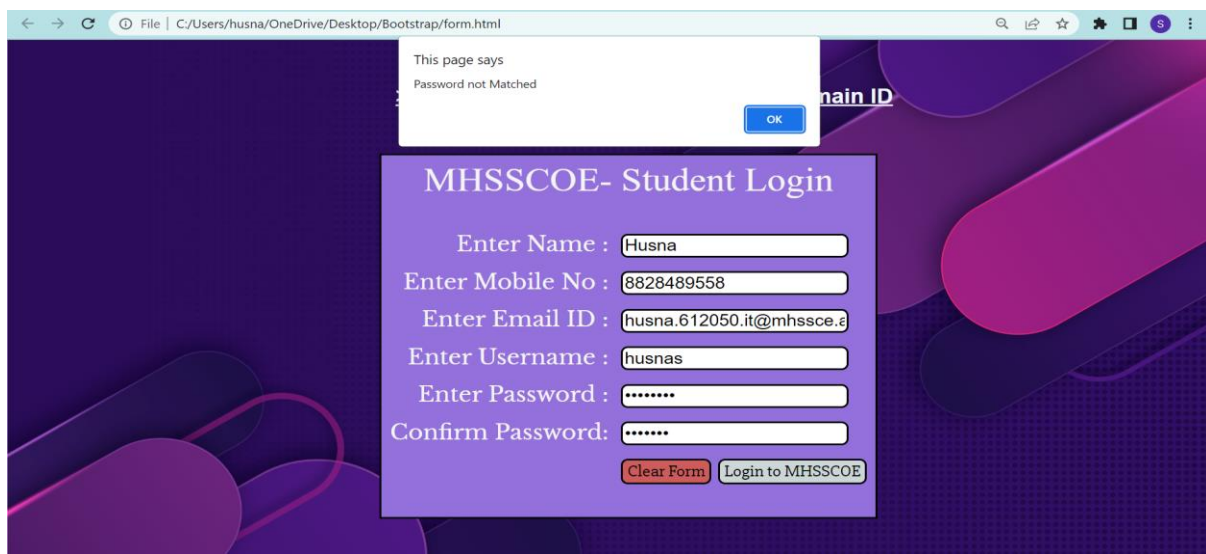

The screenshot shows the same web browser window as above. The alert box now states: 'This page says Upper case, Lower case, Special character and Numeric letter are required in Password filed' with an 'OK' button. The login form below it has the following fields and values:

- Enter Name :
- Enter Mobile No :
- Enter Email ID :
- Enter Username :
- Enter Password :
- Confirm Password:

The 'Clear Form' and 'Login to MHSSCOE' buttons remain at the bottom of the form. The background is consistent with the previous screenshot.

Alert pops up if the Password & Confirmed password don't match.

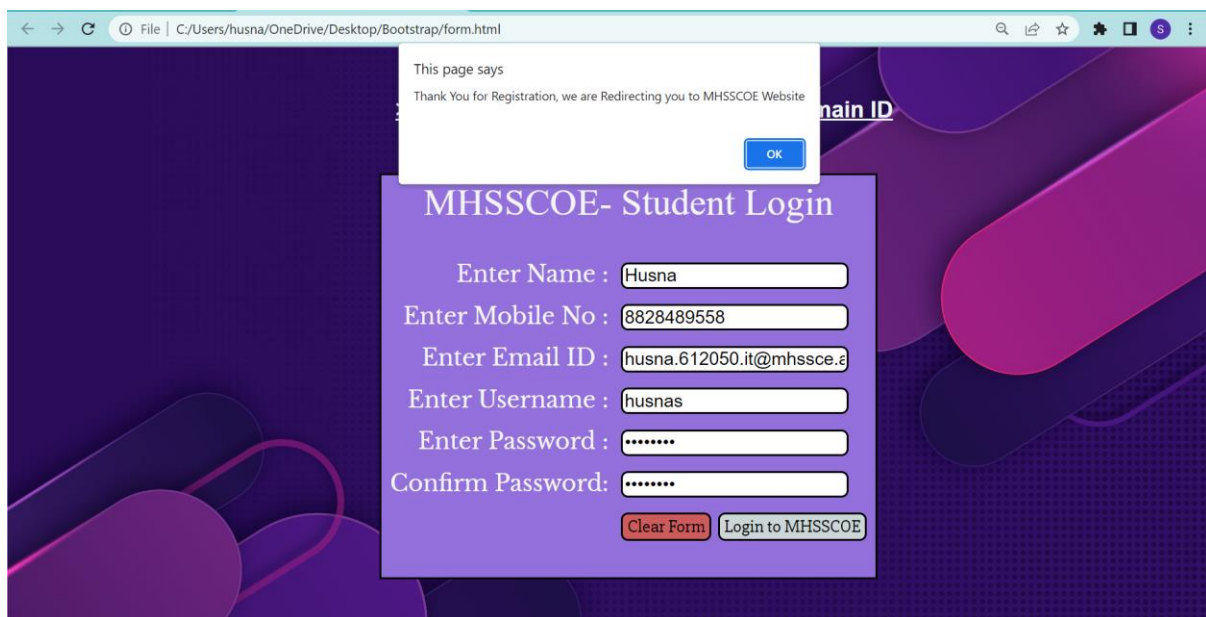

The screenshot shows a web browser window with the address bar displaying 'File | C:/Users/husna/OneDrive/Desktop/Bootstrap/form.html'. An alert box is visible in the center, stating 'This page says Password not Matched' with an 'OK' button. Below the alert is a login form titled 'MHSSCOE- Student Login'. The form contains the following fields and values:

- Enter Name :
- Enter Mobile No :
- Enter Email ID :
- Enter Username :
- Enter Password :
- Confirm Password:

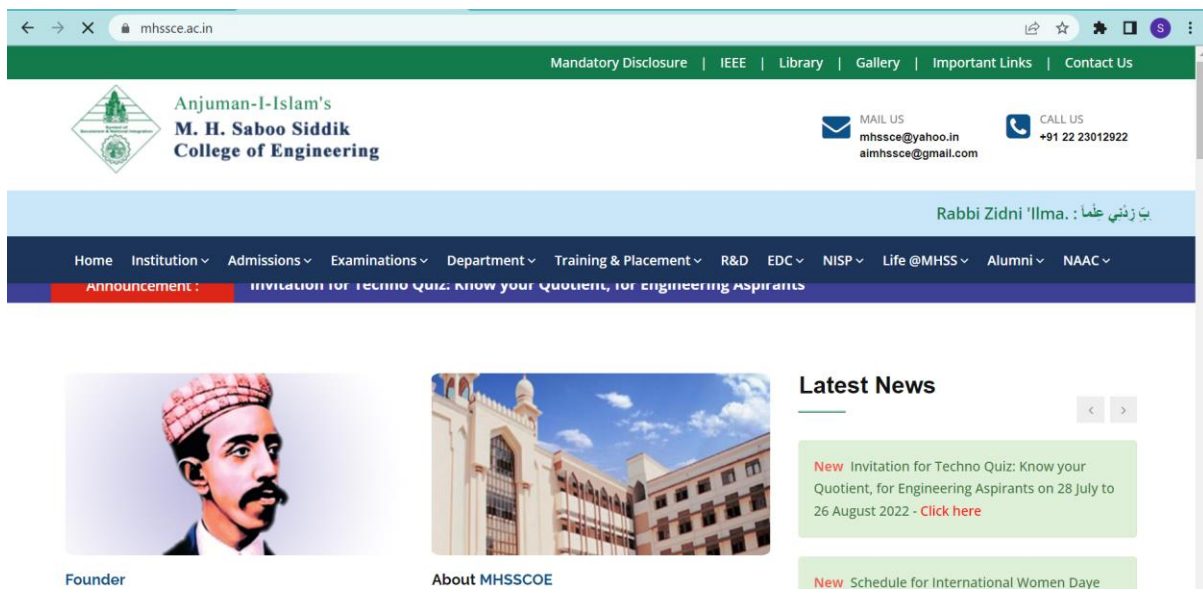

At the bottom of the form are two buttons: 'Clear Form' (in a red box) and 'Login to MHSSCOE' (in a green box). The background of the page features abstract purple and pink shapes.

The login will only be successful only when both the passwords match and satisfy the password criteria. You have now successfully logged in. Click on the OK button to be redirected to college website.

The screenshot shows the same web browser window as before, but the alert box now displays the message 'This page says Thank You for Registration, we are Redirecting you to MHSSCOE Website' with an 'OK' button. The login form titled 'MHSSCOE- Student Login' remains visible below the alert, with the same fields and values as in the previous image.

After clicking on OK, MHSCOE's landing page will open.

NOTE: If you click on Clear Form button all your entered data shall be lost as the page will be refreshed.

Conclusion:

From this experiment we understand that JavaScript is a very powerful web language and is used at a large scale. We have learned how to implement JavaScript features along with HTML and CSS to create a form and validate its different fields such as name, number, email, password, etc.
